Release Notes	112
Revision History	113

Introduction

This guide is designed for merchants planning to use the Adyen SuiteApp for payment processing. It provides a detailed, step-by-step walkthrough for locating and installing the Adyen SuiteApp, configuring key components such as Payment Processing Profiles (PPP), and setting up end-to-end transaction processing workflows.

Overview

The Adyen SuiteApp provides a fully integrated payment solution for NetSuite users. It connects your NetSuite account with Adyen's payment gateway, allowing you to perform real-time payment actions within NetSuite; such as Authorization, Capture Authorization, and charging(Sale), Refund, Credit and online checkout experience.

Adyen Supported Payment Methods

- [Credit/Debit Cards](#)
- [ACH Direct Debit](#)
- [Local Payment method](#)
- Alternate Payment Methods
 - [Klarna](#)

Supported NetSuite Flow

- NetSuite BackOffice
- SuiteCommerce (SC) and SC My Account
- NetSuite Payment Link on Invoice
- Adyen Pay by Link on Sales Order, Customer Deposit and Invoice

Supported Business Processes

- E-commerce Orders authorized then captured
- MOTO Orders authorized then captured
- Reauthorization process with payment token
- E-commerce Orders charged upfront ([Deposit](#))
- MOTO Orders charged upfront ([Deposit](#))
- Online Payments for Invoices through [NetSuite Payment Link](#)
- Adyen [Pay By Link](#) for Sales Order, Customer Deposit and Invoices
- Online Payments with [SuiteCommerce My Account](#)
- Alternate Payment Method in SuiteCommerce Checkout Payment page and for Pay by Link.
- 3DS Secure 2.0 (This is for Payment Card & Payment Card Token Checkout flow only)

Native NetSuite Payment Operation Support

Adyen is a certified SuitePayments plug-in, meaning payment processing is triggered as needed during transactions. The table below outlines the transactions and corresponding payment operations supported by the SuitePayments Bundle:

NetSuite Transaction Record	Payment Operation	General Ledger Impact
Sales Order	• Authorization • Void Authorization • Sale*	A non-posting transaction in NetSuite and does not impact the general ledger
Cash Sale	• Capture Authorization • Sale	Debit: Undeposited Funds Credit: Revenue
Customer Payment	• Sale	Debit: Undeposited Funds Credit: Accounts Receivable
*Customer Deposit	• Sale	Debit: Undeposited Funds Credit: Customer Liability
Cash Refund	• Refund	Debit: Revenue Credit: Undeposited Funds
Customer Refund	• Pay By Ref	Debit: Revenue Credit: Undeposited Funds

When the payment operation is set to "Sale" on a Sales Order, NetSuite automatically records it as a Customer Deposit to ensure the correct general ledger impact.

Admin Guide

This section provides step-by-step instructions for NetSuite and Adyen Developers to prepare both Adyen and NetSuite accounts, ensuring seamless integration for the successful installation, configuration, and use of the Adyen SuitePayments SuiteApp.

Admin Guide Checklist

Setup your Adyen Customer Area	• Setup your API credentials • Setup Capture Delay • Setup Webhooks
Setup your NetSuite Customer Center	• Enable Features • Setup NetSuite Account Preferences • Install NetSuite Chargeback Workflow Bundle • Install Adyen SuitePayments SuiteApp • Enable Adyen SuitePayments SuiteApp Plug-in • Setup Payment Processing Profile
Enabling External Role Access for Adyen Scripts	• Required Manual Configuration
Suite App Upgrades	• How to Upgrade
Reauthorization	• Set up Reauthorization for NetSuite
Set up Payment methods	• Credit/Debit Card • ACH Direct Debit • Alternate Payment Methods for SCA ◦ Klarna • Setup Payment Methods for Pay By Link • Setup Pay by Reference Payment Method • Setup Payment Card Token Payment Method • Setup General Token Payment Method
3D Secure for SuiteCommerce Websites	• Enable 3DS Secure payments for your SuiteCommerce website.
Setup Email Alerts	• Notification exceptions • Payment Event exceptions
Setup Pay By Link Feature	• Create a Pay by Link payment method. • Configure Pay by Link in your Payment Processing Profile. • Configure Pay by Link in Custom Preferences. • Configure Pay by Link Record Configuration.
Setup In-person Payments	• Set up your Adyen Customer Area • Set up your NetSuite Customer Account ◦ Enable Shipping Routes.

	○ Create a SCIS payment method instance. ○ Create a payment processing profile. ○ Set up device IDs.
Postback URL in the Terminal API settings	● Enter the postback URL in the Terminal API settings
Migration from SuiteBundle to SuiteApp	● Set up Payment Processing Profile ● Set up Pay By Link config Record ● Set up SCIS (if applicable) ● Processing payments through SuiteApp ● Uninstalling the SuiteBundle
Uninstalling the SuiteApp	● How to uninstall the SuiteApp

Get Started

To begin integration, first review the [Get started with Adyen Guide](#). This guide outlines the steps needed to accept live payments and helps you create your test account.

Once your test account is set up, enable **Chargeback Management** within your NetSuite environment.

You can begin your integration using your test account while awaiting approval for your live account application.

1. [Setup your Adyen Customer Area](#)
2. [Setup your NetSuite Customer Account](#)
3. [Setup Pay by Link](#)
4. [Setup In-person Payment](#)

Setup your Adyen Customer Area

Note: Before configuring the Adyen Customer Area, please contact the Adyen support team [here](#).

To successfully set up your Adyen Customer Area, ensure the following steps are completed:

1. [Setup your API Credentials](#)
2. [Setup Capture Delay](#)
3. [Setup Webhooks](#)

Setup your API credentials

1. Create a [basic authentication password](#) in the Customer Area.
2. Copy the username and password and store it securely in your system - you will need to enter this in your [Setup a NetSuite Payment Processing Profile](#) later.
3. Contact our [Support Team](#) and ask them to enable the following roles for your API credential.
 - Checkout Webservice role
 - Merchant PAL Webservice role
 - API PCI Payments role
4. Under Roles and Associated Accounts, enable the correct Merchant accounts for this Web service user.

Setup Capture Delay

By default, Adyen accounts are set to capture payments immediately after authorization. However, the SuiteApp allows you to design the Pay By Link feature to include a manual capture delay on invoices. To implement this, follow the steps below:

1. Log in to your Adyen Customer Area with your Merchant account.
2. Go to **Settings > Account settings**.
3. In the **Capture Delay** drop-down menu, select **Manual**.
4. Select **Submit**.

Setup Webhooks

To inform your NetSuite back-end of important events such as payment status changes or chargebacks, Adyen uses Webhooks, known as notifications in NetSuite. These are sent as HTTP call backs to the URL from the payment processing profile in NetSuite. You are responsible for setting the Webhook for each Payment Processing Profile for your NetSuite Account. You can configure this after you have completed your [setup of Payment Processing Profile in NetSuite](#).

Complete the following steps to setup Webhooks:

1. In your Customer Area, go to **Developers > Webhooks**

Note: We recommend configuring Webhooks for your company account. This ensures that you do not have duplicate webhook configurations, and improves performance.

2. Select **Webhook**.
3. From the list of Webhooks, next to Standard Webhook, select **Add**.
4. Under **General**, configure the following:

<u>Setting</u>	<u>Description</u>
Enabled	Select the toggle to enable or disable the Webhook.
Version	The Webhook version.
Description	Your description of the Webhook.
Merchant accounts	You can apply the Webhook to all merchant accounts for a company account, include only specific merchant accounts, or exclude specific merchant accounts for your company account.

5. Under Server configuration, configure the following:

<u>Setting</u>	<u>Description</u>
URL	The postback URL from your Payment Processing Profile in NetSuite. To find this, go to the payment processing profile in View mode, and then to the Payment Information section.
Method	JSON

Encryption protocol	TLSv.1.2
---------------------	----------

6. Select **Save Configuration**.

Setup your NetSuite Customer Account

To set up the Adyen plugin for NetSuite, complete the steps below:

1. [Enable Features](#)
2. [Setup NetSuite Account Preferences](#) (Not Mandatory)
3. [Install NetSuite Chargeback Workflow Bundle](#)
4. [Install Adyen SuitePayments SuiteApp](#)
5. [Enable Adyen SuitePayments SuiteApp Plug-in](#)
6. [Setup Payment Processing Profile](#)
7. [SuiteApp Upgrades](#)

Enable Features

This section comprises of the following steps:

1. Navigate to **Setup > Company > Enable > Transactions > Payment Processing**
2. Review the following features:
 - **Credit Card Payments** - This mandatory feature must be enabled.
 - **Payment Instruments** - This feature is not mandatory but we recommend enabling this feature to maximize its capabilities, as it supports both payment Instrument ON and OFF. [For more info.](#)

Payment Processing

☒ CREDIT CARD PAYMENTS
RECEIVE CREDIT CARD PAYMENTS FROM CUSTOMERS. NETSUITE OFFERS MERCHANT ACCOUNT SERVICES OR YOU CAN USE YOUR OWN.

☐ CREDIT CARD SOFT DESCRIPTORS
USE SOFT DESCRIPTORS FOR CREDIT CARD TRANSACTIONS.

☐ PAYPAL INTEGRATION
PROCESS PAYMENTS THROUGH PAYPAL.

☒ PAYMENT INSTRUMENTS
IMPROVED HANDLING OF VARIOUS PAYMENT INSTRUMENTS, INCLUDING PAYMENT CARDS, PAYMENT CARD TOKENS, AND ACH.

Setup NetSuite Account Preferences

The table below outlines specific Accounting Preferences (Not Mandatory) that can be used with the Adyen SuitePayments SuiteApp plug-in. To configure these preferences, follow these steps:

1. Go to **Setup > Accounting > Accounting Preferences**

2. Navigate to the **Items/Transactions** tab.
3. Under the **Payment Processing** field group, review and select the relevant preferences as needed and click **Save**.

Payment Processing	
☒	CUSTOMERS CAN PAY ONLINE
☒	USE CARD SECURITY CODE FOR CREDIT CARD TRANSACTIONS
☒	PROCESS AN ONLINE PAYMENT WITH SALES ORDER CREATION AT CUSTOMER CENTER
☒	ALLOW ADJUSTED EXPIRATION DATE TO IMPROVE RECURRING PAYMENTS
☒	ENABLE THE SALE PAYMENT OPERATION ON A SALES ORDER BY AUTOMATICALLY CREATING A CUSTOMER DEPOSIT.
☒	USE STRICT RULES FOR THE SELECTION OF PAYMENT PROCESSING PROFILES
☒	PRESERVE TRANSACTIONS WHEN PAYMENT IS ON HOLD

 **Note:** For more information about these preferences see [Oracle NetSuite's help article on Items/Transactions Account Preferences](#).

Install NetSuite Chargeback Workflow Bundle

The **NetSuite Chargeback Workflow Bundle** directly supports the chargeback processing and the notification system, where financial transactions and related updates are being received by NetSuite on a schedule determined by outside systems. The notifications listener is active at all times and chargeback notifications are received and shown on the Notifications main listing for user review:

1. Go to **Customization > SuiteBundler > Search & Install Bundles**.
2. Search for the **Chargeback Workflow Bundle (ID: 127355)**.

APP OBJECT
Lets you process chargeback requests for disputed payments by automatically creating journal entries that track the transfer of funds during the chargeback process.

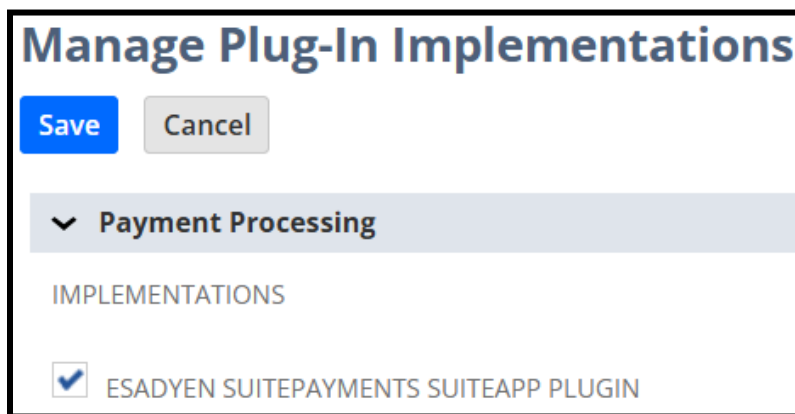

Install Adyen SuitePayments SuiteApp

1. From the NetSuite Classic Center, click on **SuiteApps**.
2. **Search** for **Adyen for NetSuite SuitePayments** and click on the **SuiteApp**.
3. To proceed with the installation of the Adyen SuiteApp to your account, click the **Install** button located in the top right corner.

Enable Adyen SuitePayments SuiteApp plug-in

After downloading the Chargeback Workflow bundle and the Adyen SuiteApp, you can activate the plug-in for use in your NetSuite account.

1. In the NetSuite user interface, go to **Customization > Plug-ins > Manage Plug-ins**.
2. On the Manage Plug-In Implementation page, select the **Adyen Payment Plug-in** and click **Save**.

Setup Payment Processing Profile

To setup a Payment Processing Profile in NetSuite and connect your Adyen Customer Area account:

1. Navigate to **Setup > Accounting > Payment Processing Profile > New**
2. From the List of Payment Gateway integrations, select **Add Profile** next to Adyen.

3. In the **Primary Information**, fill the following fields

▼ Primary

WEB SITE

Adyen SCIS

SCA Demo

NAME *

SUBSIDIARY *

SETTLEMENT CURRENCY

US Dollars

CHARGE CURRENCIES *

Australian Dollars

British Pounds Sterling

Canadian Dollars

Danish Krone

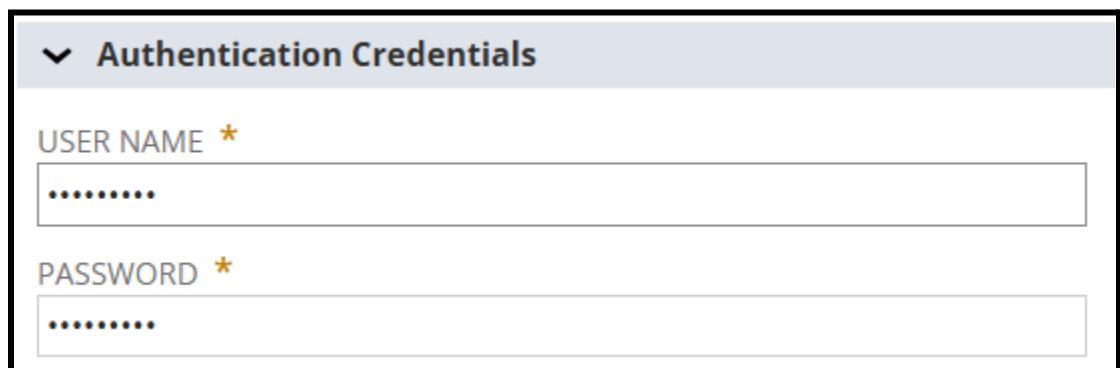

SETTLEMENT BANK ACCOUNT

☐ SUPPORT LINE-LEVEL DATA
 ☐ PAYER AUTHENTICATION
 ☐ TEST MODE
 ☐ INACTIVE

<u>Field</u>	<u>Description</u>
Website	Select the SuiteCommerce Advanced (SCA) or SuiteCommerce In-store (SCIS) websites that you want to configure for this profile
Name	Type a unique Name to identify the different profiles.(Suite App).
Subsidiary	Select the NetSuite subsidiary (legal entity) for the profile
Settlement Currency	The currency in which Adyen should pay out to your bank account.
Charge Currencies	The currencies that Adyen will process for this profile.
Support Line Level Data	Set this checkbox to allow for L2/L3 data processing

<u>Field</u>	<u>Description</u>
Settlement Bank Account	The bank account that receives the payouts from Adyen.
Test Mode	Check this box to use Adyen test endpoints and environment. When used, this overrides the endpoint set in the PRODUCTION ENDPOINT DOMAIN PREFIX field.
Payer Authentication	Enables 3D Secure authentication. To enable 3D Secure in SuiteCommerce Advance Website (SCA) refer this section
Inactive	Disables this payment processing profile.

4. In the **Authentication Credentials** section, fill the following fields:

▼ **Authentication Credentials**

USER NAME *

.....

PASSWORD *

.....

<u>Field</u>	<u>Description</u>
User Name	Please paste the username stored securely in step 1 of setup your API Credential section of setting up Adyen Customer Area. Example values is ws@Company.[YourCompanyAccount]. Be aware that this field is case sensitive.
Password	Please paste the password stored securely in step 1 of setup your API Credential section of setting up Adyen Customer Area. Be aware that this field is case sensitive.

5. In the **[ES] Adyen SuitePayment Main Config** section, fill the following fields:

[ES] Adyen SuitePayment Main Config

☐ SUPPRESS BILLING ADDRESS SUBMISSION

KLARNA PAYMENT METHOD

KLARNA ACCOUNTS PAYMENT METHOD

WECHAT PAYMENT METHOD

SCIS: SUPPRESS SIGNATURE CAPTURE

MANUAL KEY ENTRY - KEYED PAYMENT METHOD

MANUAL KEY ENTRY - MOTO PAYMENT METHOD

Field	Description
Merchant Account ID	The name of your Adyen Merchant account for which payments will be processed. To find your Merchant ID, log in to your Adyen Customer Area — it will be displayed in the top right corner. If you cannot locate it, contact the Adyen Support team for assistance.
Production endpoint domain	Enter the prefix for your live URL, which you can find in your Adyen Live Customer Area under Developers > API URLs > Prefix . Example: 23tx059714e3400a-CompanyName

<u>Field</u>	<u>Description</u>
	• Live environment: Append -pal-live to the prefix. Example: 23tx059714e3400a-CompanyName-pal-live • Test environment: Append -pal-test to the prefix. Example: 23tx059714e3400a-CompanyName-pal-test
Check endpoint domain prefix	The prefix for your live URL. Get it from your Adyen live Customer Area > Developers > API URLs > Prefix. Example: 23tx059714e3400a-CompanyName. Append -checkout-live to the end of the prefix. Example: 23tx059714e3400a-CompanyName-checkout-live. For a test environment, append -checkout-test instead. Note: this field is mandatory for Hosted Checkout.
Fraud Offset	Adyen has its own risk management system to help you fight fraud. Adyen assigns each Fraud score to payment transactions. This setting allows merchants to loosen the Fraud rules by offsetting the fraud score.
Shopper interaction override	Specify the type of payments that you want to process through this profile. Possible values: • Ecommerce: if you are using 3D Secure 2 authentication. • MOTO: if you are accepting payments by mail, fax, or phone. • POS: if you are accepting point-of-sale payments through SCIS. For all other transactions, leave this field blank.
Checkout API key entry	Enter the API Key from your Adyen Customer Area. This is only required when using Pay by Link Invoices in Netsuite.
Recurring processing model	Select a default recurring processing model. This will be sent with the payment request.
Payment Card tokenization	Select Yes if you want to tokenize payment cards. Otherwise, select No.
Default Authorization Buffer (Must be in %)	This field adds a buffer amount to each authorization request, calculated based on the percentage specified in this field.
Suppress Billing Address submission	When checked, the billing Address parameter won't be sent on all requests to Adyen.
Klarna Payment method	Select Klarna - Pay Later if you are accepting the Klarna Pay Later payment method.

<u>Field</u>	<u>Description</u>
Klarna Accounts payment method	Select Klarna - Pay over time if you are accepting the Klarna Pay over time payment method.
WeChat payment method	Select WeChat if you are accepting the WeChat Pay payment method.
SCIS: Suppress signature capture	Enable if you want to process transaction through SCIS without requiring signature from the customer
Manual key entry - keyed payment method	Select payment method for transaction where you want customer to key in their card details manually on the EMV machine while processing through SCIS
Manual key entry - MOTO payment method	Select payment method that is going to be used for transaction processed as Mail Order/Telephone Order (MOTO) through SCIS

6. In the **Hosted Payments Page Configuration**, fill the following fields:

Hosted Payments Page Configuration

THEME ID

SKIN CODE

☐ ALLOW SKIP PAYMENT PAGE

☐ MULTI-PAGE

SESSION VALIDITY (SECONDS)

HMAC KEY ENTRY

<u>Field</u>	<u>Description</u>
Theme ID	This field is required to change the look and feel of external checkout. This can be obtained from the Adyen Customer Area. An invalid themeld will cause an issue in the Adyen Hosted Checkout. A blank themeld will show the default skin of Adyen

<u>Field</u>	<u>Description</u>
Skin Code	To be reviewed
Allow Skip payment page	This allows for payment page selection to be skipped if payment has been pre-selected.
Multi-page	To be reviewed
Session Validity (Seconds)	To be reviewed
HMAC Key Entry	Log in to your Customer Area . Go to Developers > Webhooks Search by endpoint URL or WebhookID to find the webhook you want to update and select the edit icon. Go to Security and select the edit icon for HMAC key . Select Generate for a new key. Copy the HMAC key and store it securely in your system. You won't be able to restore it later. Select Save Configuration .

7. In the **Pay by Link Configuration** section, fill the following fields:

Note: Configure the **Pay By Link** settings based on your SuiteApp, making sure to use a naming convention that clearly differentiates it from the SuiteApp Payment Processing Profile.

<u>Field</u>	<u>Description</u>
Pay By Link: Tokenization	For this feature to work, "Payment Instruments" (Setup > Company > Enable Features > Transactions > Payment Processing) must be enabled. If enabled, this feature will tokenize the payment details used in a Pay By Link transaction. The token will be saved to the

<u>Field</u>	<u>Description</u>
	Payments Instruments list on the Customer page and can be used again in future transactions within NetSuite. Disabling this feature will prevent a token from being created and stored within NetSuite.
Pay By Link: Default via tokenization	For this feature to work, "Payment Instruments" (Setup > Company > Enable Features > Transactions > Payment Processing) must be enabled. The "PAY BY LINK: TOKENIZATION" field must also be enabled. This feature is only applicable to Invoices that use Pay by Link. If enabled, this feature will save the tokenized card from an Invoice as the default payment method for the Customer. The default card token is changed only from the Payments Instruments list on the Customer page. Disabling this feature will prevent a token from being saved as a default payment method within NetSuite.
Pay By Link: Payment Method	Select the payment method you are using for Pay By Link.
Pay By Link: Time out	Your default timeout hours.
Pay By Link: Blocked methods	Enter payment codes or brand codes of blocked payment methods. Separate each value with a comma. You can leave this field blank otherwise.
Pay By Link: Allowed methods	If you limit Pay By Link to specific payment methods, enter the payment codes or brand codes. Separate each value with a comma. You can leave this field blank otherwise.

8. In the **Reauthorization Configuration**, fill the following fields:

Re-Authorization Configuration

☒ ENABLE RE-AUTHORIZATION

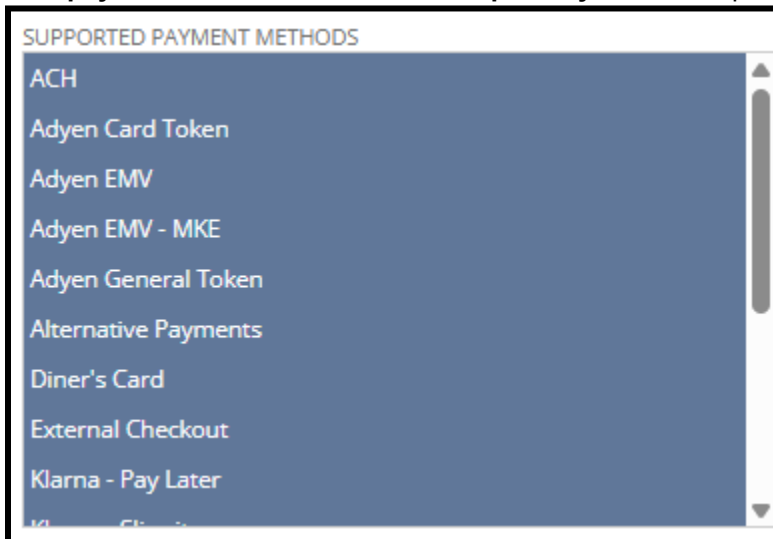

DEFAULT EXPIRATION FOR AUTHORIZATION

☐ ENABLE 3DS 2.0

<u>Field</u>	<u>Description</u>
Enable Re-authorization	Enabling the preference will allow you to re-authorize transactions manually and in bulk using mass update, as well as automatically re-authorize transactions based on their status and expiration date. For more information, please refer to the Adyen documentation
Default Expiration for Authorization	This field specifies the number of days before authorization expires. Use this field if you are enabling re-authorization and wish to set a default expiration date for sales orders. The value you enter will determine the default expiration timestamp recorded in the Adyen authorization detail. For instance, if you input "7," the default expiration will be set to 7 days from the authorization date. By default, if not modified, it is set to 7 days
Enable 3DS 2.0	Enable/Disable 3DS 2.0 Authentication for transaction. Checked if 3DS is enabled.

Note: In addition to the configuration fields described above, please refer to the [Reauthorization section](#) to complete the remaining setup steps required for enabling re-authorization functionality.

- In the **Payment Information** section, choose the **supported payment methods** you wish to enable. Each **payment method** can be **added separately** from its respective record.

- Currently, the following **Gateway Request Types** are supported:
 - **Authorization** – Places a hold on cardholder's funds until fulfillment is complete.
 - **Void** - Releases the cardholder funds that were held by an authorization request.
 - **Capture** – Captures the authorized funds after fulfillment is complete, and transfers the funds to the Merchant's account.

- **Sale** – A combination of an authorization request and a capture request in one operation.
- **Refund** – Refunds previously captured funds.

GATEWAY REQUEST TYPES

- Authorization
- Capture Authorization
- Credit
- Refund
- Sale
- Void Authorization

11. Tokenization must be enabled to create Tokens from Payment Cards or ACH or Alternate payment methods. In the **Tokenization** section, fill the following fields:

Tokenization

☐ REPLACE PAYMENT CARD BY TOKEN

PAYMENT CARD TOKEN PAYMENT METHOD

GENERAL TOKEN PAYMENT METHOD

<u>Field</u>	<u>Description</u>
Replace payment card by token	Select this checkbox if you want a token to replace payment card details. This only applies if PAYMENT CARD TOKENIZATION under [ES] Adyen SuitePayment Main Config is set to Yes.
Payment card token payment method	Select Payment Method for Payment Card Token if you want to replace Payment Card by token. You can configure this payment method following Payment Card Token section

<u>Field</u>	<u>Description</u>
General token payment method	Select Payment Method for General Token if you want to replace payment option by token. You can configure this payment method following General Token section

12. Click **Save**.

Enabling External Role Access for Adyen Scripts

With the release of **NetSuite version 2025.1**, a platform-level update has introduced a clear separation between **External Roles** and **Internal Roles** in script deployments. As a result, **External Roles** no longer have automatic access to deployed scripts.

This change directly affects critical Adyen functionalities, including **SuiteCommerce Advanced (SCA)** and **Pay by Link (PBL)**, which rely on such access for proper operation

Required Manual Configuration

To ensure uninterrupted operations and avoid feature failure, you are required to manually enable **External Roles** access for **all** the script deployment of the following script immediately after SuiteApp installation by Navigating to **Customization > Scripting > Script Deployments**

<u>Script Name</u>	<u>Required Action</u>
[ES] UE_SetCustomData	Enable External Role
[ES] UE Adyen Auth Details	Enable External Role
[ES] UE Delete Similar Token	Enable External Role

Suite App Upgrades

You can find out about a new release from the Suite Apps by navigating to **Suite Apps > Search for Adyen for NetSuite Suite Payment**. Below is how to upgrade the **Adyen SuiteApp** in your Production and Sandbox account.

Account Type	How to Upgrade
Production/Demo	New releases are automatically applied to Merchant accounts, requiring no manual changes or configurations. However, to access the latest release upgrade, Merchants must submit a request to the Adyen team for their NetSuite account to be updated.
Sandbox	To Install the New Update to Sandbox, you can follow these steps. 1. When navigating to the Adyen plug-in from the SuiteApp marketplace, you will have the option to upgrade to the latest version. 2. After the upgrade, you do not need to make any changes to the configurations.

Reauthorization

The Adyen SuiteApps support enhanced payment management by enabling **manual or automatic reauthorization** of **single or bulk** transactions based on set criteria. This helps reduce authorization failures and improve cash flow.

Reauthorization can be performed in three ways:

1. Manual Re-Authorization on a **single Sales Order**
2. Manual Re-Authorization through **Mass Update on multiple Sales Order**
3. Automatic Re-Authorization on **Multiple Sales Order using defined criteria**.

Across all three re-authorization methods, the core business logic remains consistent: the system must first attempt a re-authorization. If the re-authorization is successful, the original (initial) authorization is then promptly cancelled to prevent duplicate holds or charges on the Customer's payment method. However, if the reauthorization attempt fails for any reason, the original authorization remains active and is not cancelled. This ensures that there is always a valid authorization in place and avoids any disruption in payment processing.

Note:

1. Reauthorization is only applicable to Payment Instrument ON (PI ON).
2. Ensure that the Adyen-NetSuite integration is configured as per [Adyen Docs](#).
3. Automatic re-authorisation is only supported for one-world account.
4. The type of NetSuite Payment Methods supported for Re-Authorization are:
 - Payment Card
 - Payment Card Token
 - General Token

Setup Reauthorization in NetSuite

To set up Re-authorization, the following steps must be followed:

1. Navigate to **Setup > Accounting > Payment Processing Profile**
2. Click on **Edit** on a valid Payment Processing Profile
3. Scroll down to the **Re-Authorization Configuration** session and enable the **ENABLE RE-AUTHORIZATION** checkbox.

Setup Payment Methods

The following are the various Payment Methods that need to be setup:

1. [Credit/Debit Card](#)
2. [ACH Direct Debit](#)
3. [Alternate Payment Methods for SCA](#)
4. [Pay By Link](#)

5. Click **Save**

Note:

1. Select Klarna in the "Klarna Payment Method" field on the Payment Process Profile, and also in the "Support Payment Methods" field on the Payment Process Profile.
2. **For all alternate payment methods used in SCA**—such as Klarna - Customers will be presented with payment options available in their region. These options are determined by the payment methods enabled in your Adyen Customer Area.

If you wish to limit the payment methods displayed to customers, you must **enable only the required payment methods**.

Configuration Steps:

1. **Create a New Alternate Payment Method Record**
 - Navigate to the custom record type: [Adyen Alternate Payment Method \[customrecord_esad_ext_payment_method_app\]](#).
 - Create a new record.
2. **Specify the Payment Method**
 - In the **Payment Method** field, select the specific payment method you wish to enable for SCA.
3. **Define Allowed Payment Method Types**
 - In the **Adyen Payment Method Type** field, enter one or more valid Adyen payment method types, referencing the official Adyen documentation: [Adyen Payment Method Types](#).
 - If enabling multiple payment method types (e.g., [Klarna](#)), separate each entry with a comma.

Setup Payment Methods for Pay By Link

Setup Payment Card Token Payment Method

1. Log in to your NetSuite Customer Center.
2. Go to **Setup > Accounting > Accounting Lists > New**.
3. Select **Payment method**.

The screenshot shows the 'Payment Method' setup form in NetSuite. The form is titled 'Payment Method' and has a 'List Search' link in the top right. It features a 'Save' button with a dropdown arrow, a 'Cancel' button, and an 'Actions' link. The form is divided into several sections: 'NAME' with a text field containing 'Payment Card Token'; 'TYPE' with a dropdown menu set to 'Payment Card Token'; 'DEBIT CARD' with an unchecked checkbox; 'REQUIRES LINE-LEVEL DATA' with a checked checkbox; 'ASSOCIATED PAYMENT PROCESSING PROFILES' with a list box containing 'Adyen_ws_447526', 'SCIS Adyen ws_238101', 'Test A', 'Test B.1', and '[ES] Test Elim'; 'COUNTRIES' with a list box containing 'Afghanistan', 'Albania', 'Algeria', and 'American Samoa'; 'INACTIVE' with an unchecked checkbox; and 'DISPLAY IN WEBSITE' with an unchecked checkbox. Below these sections is a tabbed interface with 'Account', 'Payment Visuals', and 'Workflow' tabs. The 'Account' tab is selected, showing options for 'GROUP WITH UNDEPOSITED FUNDS' (selected) and 'DEPOSIT TO ACCOUNT' (with a dropdown menu showing '[Settlement Account]'). At the bottom, there are 'Save', 'Cancel', and 'Actions' buttons.

4. Set the following fields on the Payment method form

<u>Field</u>	<u>Description</u>

3D Secure 2.0

3D Secure 2.0 is an authentication protocol that enhances online payment security by enabling the issuing bank to verify the cardholder's identity through secure communication with the acquirer and card networks like Visa, Mastercard and Discover.

Setup 3DS 2.0 on Payment Processing Profile

1. Navigate to **Setup > Accounting > Payment Processing Profile > Edit**
2. Find the **Enable 3DS 2.0** checkbox and ensure it is checked.
3. Scroll down to **Payment Information** and under the **Gateway Requests Types** ensure **authentication** is selected

4. Click Save.

Note: The Above Setup instructions is to enable the 3DS 2.0 functionality for Payment Link and Pay By Link. To enable 3DS 2.0 for SuiteCommerce Advanced and SuiteCommerce My Account, ensure the below additional steps are configured.

Set up 3D Secure for SuiteCommerce Websites

To enable 3D Secure payments for your SuiteCommerce website:

1. In NetSuite, go to Commerce > Websites > Configuration.
2. Select your website and domain
3. Click Configure

SuiteCommerce Configuration

Configure Reset Copy configuration

SELECT WEBSITE
SCA Demo

SELECT DOMAIN
qa.adyen.elimsolutions.ca

4. Go to the Payment Instruments & Methods.
5. Select the Enable 3D Secure Payments checkbox.

6. Select Save.

Note: NetSuite 3D Secure 1.0, a former method for enhancing payment security, is no longer supported. Support for 3D Secure 1.0 ended on October 15, 2022, according to Oracle.

Setup Email Alerts

Email alerts inform you of exceptional transactions that require additional attention from your side. You can set up email alerts for:

- **Notification exceptions:** Orders that need to be manually updated in NetSuite.
- **Payment Event exceptions:** Payments that were rejected.

Notification exceptions

In extremely rare scenarios, for example when a capture failed after we sent it to the bank/third-party processor, a payment status change cannot be reflected in NetSuite. To keep your NetSuite and Adyen back ends synchronized, you need to **manually** update the order in NetSuite.

Though extremely rare, these scenarios may happen, and taking the appropriate action can be valuable to your business processing.

To receive emails informing you when a transaction needs to be manually updated:

1. Log in to your NetSuite Account
2. Go to **Transactions > Management > View Gateway Asynchronous Notifications**.
3. In the top-right corner of the page, select **Search**, and then Create **Saved Search**.
4. In the **Criteria** tab, in the **FILTER** list:
 - Select **Validate Postback Status** and set it to any of: Accept.
 - Select **Error** and set it to: is not empty.
 - Select **Date**, and set it to the period for which you'd like to receive the alerts.
 - We recommend that you select on to: today.
5. Go to the **Email** tab:
 - In the **Specific Recipients** tab, enter the recipients for the scheduled emails.
 - Select the **SEND EMAILS ACCORDING TO SCHEDULE** checkbox.
 - In the **Schedule** tab, define the schedule for receiving the emails.
 - We recommend using DAILY EVENT, in combination with either Repeat every 1 day(s), or Repeat every weekday.
6. Select **Save & Run**.

Payment Event exceptions

To receive emails informing you when a transaction was rejected:

1. Log in to your NetSuite Customer Center.
2. Go to **Transactions > Management > View Payment Events**.
3. In the top-right corner of the page, select **Search**, and then Create **Saved Search**.
4. In the **Criteria** tab, in the **FILTER** list:
 - Select **Payment Event Result** and set it to any of: Reject and Payment Hold.
 - Select **Payment Event Date** and set it to the period for which you'd like to receive the alerts.
5. Go to the **Email** tab:
 - In the **Specific Recipients** tab, enter the recipients for the scheduled emails.
 - Select the **SEND EMAILS ACCORDING TO SCHEDULE** checkbox.
 - In the **Schedule** tab, define the schedule for receiving the emails.
6. Select **Save & Run**.

Setup Pay by Link feature

You can use the [Pay by Link](#) feature of Adyen in NetSuite to offer payment links as a payment method when you generate an invoice or sales order in NetSuite. A payment link is a URL that will take your customer to an Adyen-hosted payment page to make the payment.

Follow the below steps to setup Pay By Link feature in NetSuite:

1. [Create a Pay by Link Payment Method.](#)
2. [Configure Pay by Link in your Payment Processing Profile.](#)
3. [Configure Pay by Link in Custom Preferences.](#)
4. [Configure Pay by Link Record Configuration.](#)

Configure Pay by Link in Custom Preferences

1. Go to **Setup > Company > General Preferences**.
2. Configure the following fields in the **Custom Preferences** tab:

Field	Description
Pay by Link Test Mode	Check this box to turn on test mode.
Generate Pay By link on Before Submit	Check this box if you want the Pay by Link payment URL to generate before you submit an invoice. Otherwise, the payment URL is generated after you submit.
Pay By Link : Payment Method 1	Select a payment method in a payment profile that uses Pay by Link.
Pay By Link: Payment Method 2	Select a payment method in a payment profile that uses Pay by Link.
Pay By Link: Payment Method 3	Select a payment method in a payment profile that uses Pay by Link.

Configure Pay by Link Record Configuration

1. Go to **Customization > Lists, Records & Fields > Record Types**.
2. Find **[ES] Adyen Pay by Link Config(Customrecord_esad_paybylink_cfg_app)** and select **New Record** in the same row.
3. Configure the following fields:

<u>Field</u>	<u>Description</u>
Name	Enter a name for this record.
Payment Processing profile Internal ID	Enter the record ID for the Payment Processing Profile (PPP). To find the record ID: 1. Go to Setup > Accounting > Payment Processing Profiles. 2. Select View for the PPP you use for Pay by Link. The ID is the last number in the URL. For example, in the URL <code>example.app.netsuite.com/app/setup/creditcardsetup.nl?id=5</code>, the ID is 5.
Subsidiary	Select the subsidiary assigned to the PPP.
Adyen SuitePayment Config	Select the SuitePayment Config ID. To find the Config ID: 1. Go to Setup > Accounting > Payment Processing Profiles. 2. Select View for the PPP you use for Pay by Link. 3. Find the CONFIGURATION LINK and select Open Configuration. The ID is the last number in the URL. For example, in the URL <code>example.app.netsuite.com/app/common/custrecordentry.nl?rectype=311&id=39602</code>, the ID is 39602.

Setup In-person Payments

Configure SuiteCommerce InStore (SCIS) for processing point-of-sale (POS) payments with Adyen.

Before you begin

1. Install the [NetSuite Chargeback Workflow Bundle](#), and the Adyen SuiteApp.
2. Make sure that your local network allows your POS app and payment terminal to connect to a network. For more information, refer to our [point-of-sale network recommendations](#).

Note: Our SCIS integration supports the following payment terminals: [e280](#), [e285](#), [M400](#), [P400 Plus](#), [V400c](#), and [V400m](#).

You can setup POS by following below steps:

1. Set up your Adyen Customer Area: We recommend creating a separate Adyen [Merchant account](#) for your POS processing and payment processing profile in NetSuite. If you operate multiple physical stores, you can link these to one merchant account, using the 'storeID' to identify the individual store location. To successfully set up your Adyen Customer Area, ensure to [set up API credentials](#).
2. [Setup your NetSuite Customer Account](#)
3. [Setup Webhooks](#)
4. [Enter the postback URL in the Terminal API settings](#)

Set up your NetSuite Customer Account

To set up POS processing in NetSuite:

1. [Enable Shipping Routes](#).
2. [Create a SCIS payment method instance](#).
3. [Create a payment processing profile](#).
4. [Set up device IDs](#).

Enable Shipping Routes

To set up multiple shipping routes for processing POS payments:

1. Log in to your NetSuite Customer Center.
2. Go to **Setup > Company > Enable Features > Transactions**.
3. Select **Shipping & Receiving** and enable **MULTIPLE SHIPPING ROUTES**.

Create a SCIS Payment Method Instance

To set up a separate payment method instance for the SCIS bundle:

1. In your NetSuite account, go to **Setup > Accounting > Accounting Lists > New**.
2. Select **Payment method**.

6. Select the **Payment method** you created above.
7. Fill all necessary fields
8. Click **Save**

Create a Payment Processing Profile

Your POS implementation needs its own payment processing profile. To create a payment processing profile:

1. In your NetSuite Customer Center, go to **Setup > Accounting > Payment Processing Profiles > New**.
2. In the **Name column**, find **Adyen** and select **Add Profile**. This opens a page for editing the new profile.

Fill out the following fields:

<u>Field</u>	<u>Description</u>
Website	Select the SCIS website .
Name	A unique name for this profile.
Subsidiary	The NetSuite Subsidiary for this profile.
Settlement currency	The currency in which Adyen should pay out to your bank account.
Charge currency	The currencies that Adyen will process for this profile.
Settlement Bank Account	The bank account that receives the payouts from Adyen.
Test mode	Use Adyen test endpoints. If selected, this overrides the endpoint that you enter in the PRODUCTION ENDPOINT DOMAIN PREFIX below.
Inactive	Disable this payment processing profile.

3. In the **Authentication Credentials** section, enter the username and basic authentication password that you set up in your Adyen [Customer Area](#) in [Step 1](#).

4. In the **Adyen SuitePayment Main Config** section, fill out the following fields:

<u>Field</u>	<u>Description</u>
Merchant Account ID	The name of your Adyen merchant account for which the POS payments will be processed.
Production Endpoint Domain Prefix	The live URL prefix from your Customer Area > Account> API URLs > Point of Sale. Example: https://pos-payment-test. This field is not used when you check the TEST MODE above.
Shopper Interaction Override	Select: POS

5. In the **Payment Information** section, select **Adyen EMV**.
6. In the **Gateway Request Types** section, check **AUTHORIZATIONS, CAPTURES, SALES, and REFUNDS**.

Set up device IDs

Every payment terminal that you are using with Adyen needs to be registered in NetSuite:

1. In your NetSuite Customer Center, search for **SCIS payment devices**.
2. Select **New SCIS Payment Device**.
3. In the **DEVICE ID** field, enter the unique terminal ID of your Adyen payment terminal.
You can find this in the Adyen [Customer Area](#), under **Point-of-sale >Terminals**.
! The unique terminal ID = **[Device model]-[Serial number]**, for example: **P400Plus-123456789**.
4. You can also find the serial number on the terminal itself: select 5 on the terminal, and then select Confirm . This opens the quick info menu, and shows the serial number.
5. Under **SUPPORTED PAYMENT METHOD**, select **Adyen EMV**.
6. Select **Save** at the top-left corner of the page.

Enter the postback URL in the Terminal API settings

1. Log in to your Adyen [Customer Area](#), and switch to your POS merchant account.
2. Go to **In-person Payments > Terminal settings > Integrations**.
3. In the **Terminal API** section, select **Decrypted**.
4. Under **Event URLs**, select **Add new**.
5. Select the pencil icon next to the field that appears.
The **Add URL** dialog opens.
6. Enter the details:
 - **URL:** This URL will be copied from the **Postback URL** of **NetSuite Payment Processing Profile**
Example:
["https://system.netsuite.com/payments/postback?compid=TSTD RV1919617&nlnm ..."]
 - **Public:** select this option if the specified URL is on a public network.
 - **Local:** select this option if the specified URL is on a Local Area Network.
7. Select **Add URL**.
8. Select **Save**.
9. Contact our [POS Support team](#) to toggle the **Enable Websockets** feature.
10. Ensure that Terminal Settings are set for each device.

Steps for Migration from SuiteBundle to SuiteApp

This section provides key information for Merchants who have both the **SuiteBundle** and **SuiteApp** installed and are migrating from SuiteBundle to SuiteApp. After installing the SuiteApp, ensure it is properly configured by following the steps outlined below.

1. [Set up Payment Processing Profile](#)
2. [Set up Pay By Link config Record](#)
3. [Set up SCIS](#) (if applicable)
4. [Processing payments through SuiteApp](#)
5. Uninstalling the SuiteBundle – Before uninstalling, ensure that all **Pay by Link** URLs generated through the SuiteBundle have been used and that the corresponding payments have been collected. Once the SuiteBundle is uninstalled, any Pay by Link created from it—whether linked to a transaction or generated manually—will no longer function. Additionally, confirm that all of your business processes are fully operational in the **SuiteApp** before proceeding with the uninstallation of your SuiteBundle.

Caution: Uninstalling the SuiteBundle will permanently remove all bundle-related objects and instances, including any associated custom records. It will also inactivate the SuiteBundle Payment Processing Profile. If you are using SuiteCommerce InStore (SCIS), uninstalling the SuiteBundle will delete all terminal results. Additionally, the re-authorization process will no longer be able to void any previous transactions once they are re-authorized.

Note: The SuiteApp contains similar objects to those in the SuiteBundle, but with different NetSuite internal IDs. However, the SuiteApp includes built-in logic that displays only the fields relevant to the user, based on the **Payment Processing Profile** selected for processing the payment.

Uninstalling the SuiteApp

To uninstall the SuiteApp, follow these steps:

1. Navigate to **Customization > SuiteCloud Development > Installed SuiteApps**
2. Click on  beside the SuiteApp and select **Uninstall**

End User Guide

This section of the guide is tailored towards NetSuite users processing transactions.

End User Guide Checklist - Payment Instrument ON

A new payment event record will show that the Payment Authorization was voided at the bottom of the billing tab.

Adyen Pay By Link

This feature enables merchants to generate a Pay by Link to accept payments for an Authorization or Sale directly from a Sales Order, Invoice, or Customer Deposit.

It facilitates credit card payment collection through Adyen Pay by Link, initiated from a Sales Order.

Processing Payment Cards on Adyen Pay By Link on a Sales Order

1. Navigate to **Transaction > Sales > Sales Order**
2. Fill all mandatory fields
3. Under the Billing Tab fill the following Tab

Payment •		
PAYMENT OPTION Pay by Link ▼	PAYMENT PROCESSING PROFILE * [ES] Adyen SuiteApp ▼	PAYMENT OPERATION Authorization ▼
	HANDLING MODE * Process ▼	CHANGE DUE

Alternative Payment Processing

Alternative Payment methods include Klarna, Google pay, Apple Pay and Local Local payment methods such as Ali Pay. Below is a demonstration process for Klarna and Google pay checkout via SCA and Pay by link.

Performing Klarna checkout in SuiteCommerce Advanced (SCA)

1. Navigate to the SuiteCommerce website
2. Add items to cart and continue to checkout.
3. On the checkout page, fill in **Shipping** and **Billing address** and select address for delivery
4. Choose Klarna as payment method

Processing Payment Card tokens on Adyen Pay By Link on a Sales Order

Navigate to **Transaction > Sales > Sales Order**

1. Create new **Sales Order**
2. Fill all mandatory fields
3. Under the Billing Tab fill the following Tab

Payment •		
PAYMENT OPTION	PAYMENT PROCESSING PROFILE *	PAYMENT OPERATION
Pay by Link ▼	[ES] Adyen SuiteApp ▼	Authorization ▼
	HANDLING MODE *	CHANGE DUE
	Process ▼	

<u>Field</u>	<u>Description</u>
Payment Option	Adyen Pay By Link (Select payment option selected for pay by link on the Payment Processing profile)
Payment Operation	Authorization/Sale
Payment Processing Profile	Set to your Adyen Payment Processing Profile
Handling Mode	Set to Process

4. Click **Save**
5. Click on the **Payment** subtab under the Billing Tab
6. And click on the **Generated Adyen Pay By Link**
7. The system displays a list of accepted payment methods to complete payment.
8. Select Ali pay payment method
9. continue the process and Click **Pay**

Note: If the alternate payment method (APM) is tokenized during checkout through Pay By Link (PBL) or SuiteCommerce Advanced (SCA), a **General Token** Payment Instrument is created on the customer record under the **Financial** tab. The Payment Instrument will display the payment method type as its display name.

Credit Card Processing - Back Office Processing

Sales Order - Authorization

Performing an Authorization on a credit card when saving a Sales Order.

1. Navigate to **Transactions > Sales > Enter Sales Orders**.
2. Complete the **Sales Order** form
3. Set the fields required for payment processing:

The screenshot displays the 'Payment' section of the Adyen SuiteApp, specifically the 'Adyen Authorization Details' and 'Adyen SuiteApp Authorization' tabs. The form is divided into two columns. The left column contains fields for 'PAYMENT METHOD' (set to Visa), 'CREDIT CARD SELECT', 'CREDIT CARD #' (4111111111111111), 'CSC' (737), 'EXPIRES (MM/YYYY)' (03/2030), 'NAME ON CARD' (Test card), 'CARD STREET' (Main street), 'CARD ZIP CODE' (90001), and 'PAYMENT PROCESSING PROFILE' (Adyen_ws_447526). The right column contains checkboxes for 'GET AUTHORIZATION' (checked) and 'CREDIT CARD APPROVED', a 'P/N REF.' field, 'AUTH. CODE', 'AVS STREET MATCH', 'AVS ZIP MATCH', 'CSC MATCH', a 'RECURRING PAYMENT' checkbox, 'CHANGE DUE', 'CREDIT CARD SIGNATURE' (with a placeholder '<Type then tab>'), 'TOTAL TENDERED', and 'ADYEN PAYMENT CARD TOKENIZATION OVERRIDE'.

<u>Field</u>	<u>Description</u>
Payment Method	Select your customer's payment method here.
Credit Card Select	Select a credit card stored on the customer record to use as the payment method for this sale.

<u>Field</u>	<u>Description</u>
	Click New to add a new credit card. For details on credit cards on record, view the customer record at Lists > Relationships > Customers .
Credit Card #	If payment is by credit card, enter the card number here. Enter numbers only, without spaces. NetSuite is a secure site. If a NetSuite merchant gives a customer access to view payment information, only that merchant and that customer will be able to see this number.
CSC	Enter the three-digit security code from the back of the customer's credit card.
Expires (MM/YYYY)	Enter the three-digit security code from the back of the customer's credit card.
Name on Card	NetSuite enters the cardholder name from the default credit card on the customer's record. If the field contains no value or the wrong value, check the customer's record at Lists > Relationships > Customers . On the Financial subtab of the customer's record, verify that the Cardholder Name field contains the correct information.
Card Street	NetSuite enters the street address from the customer's billing address. If the field contains no value or the wrong value, check the customer's record at Lists > Relationships > Customers . On the Address subtab of the customer's record, make sure the default billing address contains the correct street address.
Card Zip Code	NetSuite enters the zip or postal code from the customer's billing address. If the field contains no value or the wrong value, check the customer's record at Lists > Relationships > Customers . On the Address subtab of the customer's record, make sure the default billing address contains the correct zip or postal code.
Payment Processing Profile	Select a payment processing profile. For details about payment processing profiles, click Help and read Setting Up Credit Card Processing Profiles in NetSuite.
Get Authorization	Check this box only if you have a merchant account with NetSuite. When you click Save, NetSuite sends a request to your payment gateway to process the request according to the processing profile settings.

Field

Description

Note: If the payment processing profile supports sales and does not support authorization, the gateway performs a sale operation, and the collected funds are associated with the sales order as a customer deposit.

4. Click **Save**.

On the Address subtab of the customer's record, make sure the default billing address contains the correct zip or postal code.
Payment Processing Profile	Select a payment processing profile. For details about payment processing profiles, click Help and read Setting Up Credit Card Processing Profiles in NetSuite.

<u>Field</u>	<u>Description</u>
Charge Credit Card	Place a check mark in this box only after the credit card charge has been validated outside NetSuite, such as by a card-swipe terminal. If you have a NetSuite Merchant account, then this field is automatically filled as soon as the charge is approved.

4. Click **Save**.

Migration Activities - Processing SuiteBundle transactions through SuiteApp

Back office processing

This session details the steps to process payment transactions during migration from the Adyen SuiteBundle to the Adyen SuiteApp. It covers scenarios for Authorization, Capture Authorization, Standalone Sale, and Refund operations.

Once the SuiteApp is installed, it is recommended to use it exclusively for payment processing and discontinue the use of the SuiteBundle. All new transactions should be captured through the SuiteApp, while completing the capture process for any authorizations previously created in the SuiteBundle.

Performing an Authorization in SuiteBundle and then Capture in SuiteApp

Step 1: Authorization in SuiteBundle

1. Navigate to **Transactions > Sales > Enter Sales Orders**.
2. Complete the **Sales Order** form
3. Set the fields required for payment processing:

The screenshot shows the 'Payment' section of the SuiteApp interface. It contains several fields for configuring a payment transaction. A red box highlights the 'PAYMENT PROCESSING PROFILE' field, which is set to '[ES]Adyen PBL Bundle'. Other visible fields include 'PAYMENT OPTION' (VISA *1111 (3/2030)), 'CSC' (737), 'HANDLING MODE' (Process), 'PAYMENT OPERATION' (Authorization), 'CHANGE DUE', 'CREDIT CARD SIGNATURE' (<Type then tab>), and 'TOTAL TENDERED'.

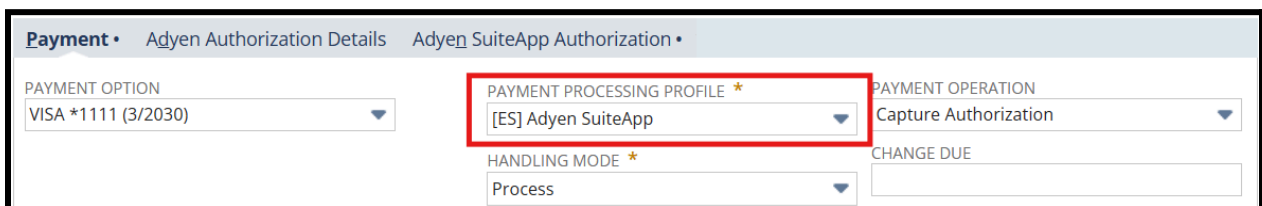

<u>Field</u>	<u>Description</u>
Payment Option	Select an existing Payment Card Token/General Token or create a new Payment Card/ACH by clicking on the “+” next to the dropdown.
Payment Operation	Set to Authorization
Payment Processing Profile	Set to your Adyen Bundle Payment Processing Profile
Handling Mode	Set to Process

4. Click **Save**

Step 2: Capture Authorization in SuiteApp

1. Navigate to **Transactions > Sales > Sales Order > List** and select an Authorized Sales Order from Suite Bundle
2. Click on **Next Bill**
3. Complete the Referenced Cash Sale form
4. Set the fields required for payment processing:

<u>Field</u>	<u>Description</u>
Payment Option	Select an existing Payment Card or create a new Payment Card
Payment Operation	Set to Capture Authorization
Payment Processing Profile	Set to your Adyen SuiteApp Payment Processing Profile
Handling Mode	Set to Process

Payment • [Adyen Authorization Details](#) [Adyen SuiteApp Authorization](#) •

PAYMENT OPTION VISA *1111 (3/2030) ▼	PAYMENT PROCESSING PROFILE * [ES] Adyen SuiteApp ▼	PAYMENT OPERATION Capture Authorization ▼
	HANDLING MODE * Process ▼	CHANGE DUE

5. Click Save

Note: If you are capturing transactions in the **SuiteApp** that were authorized in the **SuiteBundle** automatically, ensure that a **script or workflow** is deployed to update the Payment Processing Profile field on the **Cash Sale** record so that it references the SuiteApp's Payment Processing Profile.

Processing a Standalone Cash Sale (Sale) – SuiteBundle and Refund on SuiteApp

Step 1: Charge a standalone Cash Sale

- 1. Navigate to **Transactions > Sales > Enter Cash Sale**.
- 2. Complete the **Sales Order** form
- 3. Set the fields required for payment processing:

Payment •
